using biological terrain effectively
# biological terrain evaluation software V5
from Family Technologies

Biological terrain is simple conceptually, but developing an effective recommendation plan from the pH, rH2 and r values can be challenging. This software is designed to walk you through the steps of interpreting the terrain numbers, identifying conditions which need to be addressed, developing a remedy plan and preparing an effective presentation for your client. In addition, the software will reinforce the principles of terrain analysis as you use it, effectively becoming a training tool.
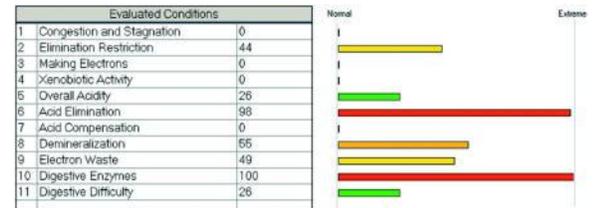

Interprets terrain and identifies important patterns

The Evaluation software analyzes the pH, rH2 and r values for saliva, urine and optionally blood (professional version). The software looks at the individual values, and the relationships between the values to identify important patterns. These patterns represent various undesireable conditions in the terrain which can be improved with an appropriate remedy protocol.

Produces a list of objectives for your approval

Each terrain pattern represents a physiological system which is operating outside of normal parameters. These systems become the objectives which the practitioner focuses on when developing the remedy plan. The objectives are presented to the practitioner in a prioritized order as calculated by the software. It is up to you to make a final decision of the priority of the objectives.

|	Evaluated Conditions	
1	Congestion and Stagnation	0
2	Elimination Restriction	44
3	Making Electrons	0
4	Xenobiotic Activity	0
5	Overall Acidity	26
6	Acid Elimination	98
7	Acid Compensation	0
8	Demineralization	55
9	Electron Waste	49
10	Digestive Enzymes	100
11	Digestive Difficulty	26

Helps you develop a recommendation plan

A set of default remedy recommendations is automatically produced for each objective. These recommendations can be produced from generic products or from Nature's Sunshine line of remedies. Other product lines such as Transformation Enzymes products will be included in the future. You can also customize the recommendations in any way you like with other products.

Select	Remedy	Hits	Weight	Objective
	Adrenal Support	12	3	Kidney Elimination
✓	Kidney Drainage	45	3	Kidney Elimination
✓	Magnesium Complex	33	3	Overall Acidity
	Kidney Drainage	45	3	Overall Acidity
✓	Lymphatic Drainage	33	3	Overall Acidity
	Magnesium Complex	33	3	Elimination of Acids
	Lymphatic Drainage	33	3	Elimination of Acids
	Kidney Drainage	45	3	Elimination of Acids

Helps you communicate effectively

The Evaluation software produces an attractive report of your remedy plan along with as much or as little supporting information as you would like. With some product lines, dosages for remedies are automatically included. You can also include notes with each remedy and general notes as well. The Evaluation software also stores all your client records and test histories. You can compare up to 15 test histories for a client to evaluate terrain trends over time.

more details....

Keeps your client records, tests and plans
• An unlimited number of clients, tests and plans can be stored.
• Review or reprint stored tests, analysis and plans at any time.
• Copy and modify a previous plan to give your client a revised version.
• Compare up to 15 previous tests for a client in graphical format to clearly see trends in the terrain measurements.
• Print address labels for all clients directly from the software.
• Backup and restore functions built-in to protect your valuable data.

Powerful analysis engine
• Evaluates terrain measurements and looks for dozens of different identifi - able conditions.
• Proposes a set of prioritized objectives which will address the conditions.
• Presents interpretive results with clear graphs and charts.
• Produces a default set of remedy recommendations for each objective.
• Lets you choose remedy recommendations from different product lines. Additional product lines will be added soon.
• Each remedy can have dosages and instructions associated with it.
• Fully customizable - add your own products, change dosages for products, and modify default recommendations.
• A 'biological age' number is derived from the terrain data which can be used as a effective tool to help encourage compliance.
• It is like having an expert sitting beside you!

Helps you learn as you work
• Hyperlinks in the analysis screens allow you to click on a term and automatically open reference documentation on that subject.
• All reference documentation is available in a 'library' window which allows you to read the entire text at any time.
• An optional Tutorial Pack is available which contains a hour of audio-visual demonstrations covering all functions. In addition to the basic techniques of working with client data, tests and analysis, the tutorials explain the analysis concepts and how to customize recommendations. They also show how to add your own products and customize plans.

Flexible report options
• Comphrehensive report generator produces powerful, effective, visuals!
• Choose as much or as little content in your report as desired. Reports typically range from 1 to 15 pages and can include colorful charts.
• Include explanation of biological terrain concepts if desired.
• Preview each page of the report with full zoom capability.
• Allows an unlimited number of remedies and explanatory notes.
• Reports can be printed in Spanish if desired (This under development)
• Can include blood-type dietary recommendations if blood type is known.
• Export your plan and report as a PDF fi le to easily email it.

Software License
• Software is licensed for one user on one computer.
• A yearly registration fee is required to unlock the software. The first year is included in the purchase price for new purchases. This fee covers technical support and software upgrades throughout the year.

How much is it?
The software costs $500 for the standard version and $550 for the professional version. Upgrades for V4 owners cost $250 for the standard version and $300 for the professional. The tutorial pack costs $35 if purchased at the same time.

What about support?
We offer technical support for registerd users by telephone, fax or email. We also have support material on our websites. The software will automatically detect, download and install updates from our website if you have Internet.

What comes with it?
You will receive a DVD case containing a Quick Start User's Guide and a CD. If you order the tutorials, they also come on the same CD.

System Requirements...
Windows XP, Vista, Win7/8/10
1400x900 or higher resolution
16 bit or higher color
Sound card required for tutorials

About us...
Family Technologies has been developing software and equipment for health practitioners for 19 years. We are a small, family-owned high technology business. Our goal is to help you be successful in your practice!
